Thank you for choosing a NIVELCO instrument.
We are sure that you will be satisfied throughout its use!

NIVOCONT
VIBRATING ROD LEVEL SWITCHES

USER'S MANUAL

1. APPLICATION

The NIVOCONT vibrating rod level switches are suitable for low and high level indication of granules and powders with a min. 0.05 kg/dm³ density such as cement, lime, sand, grain, feed, sugar, etc. Dust Ex versions are available for using the instrument in explosion-proof environment.

2. TECHNICAL DATA

2.1 GENERAL SPECIFICATION

VERSION		STANDARD	PIPE EXTENDED	CABLE EXTENDED
Probe length		207 mm	0.3 … 3 m	1 … 20 m
Material of wetted parts		1.4571		Probe: 1.4571 Cable: PE coated
Housing material		Aluminium: Powder paint coated **(R-500 series)** Plastic: PBT fibre-glass reinforced, flame-retardant **(R-600 series)**		
Process connection		**R_H; R_R.; R_K:** 1½" BSP **R_N; R_L; R_C:** 1½" NPT		
Temperature ranges		See table 2.2 and Temperature diagram		
Max. pressure (absolute)		25 bar (2.5 MPa)		6 bar (0.6 MPa)
Minimum medium density **(1)**		0.05 kg/dm³ (max. granular size: 10 mm)		
Response time (selectable)	Not vibrating (covered)	< 1.8 sec or 5 ±1.5 sec		
	Vibrating (free)	< 2 sec or 5 ±1.5 sec		
Supply voltage (universal)		normal type: 20…255 V AC/DC Ex type: 20…250 V AC (50/60Hz) or 20…50V DC		
Power consumption		≤ 2.5 VA / 2 W		
Electrical connections		2 pcs. M20x1.5 cabel glands: protection ExtD (ATEX) for cable ∅9 to 13 mm or protection Ex IIIC IP67 (IECEx) or M20x1.5 plastic glands for cable ∅6 to 12 m) for normal 2 pcs. plug-in type terminal blocks for max. 1.5 mm² wire cross section		
Ingress protection		IP67 (NEMA6) MSZ EN 60529:2001		
Electrical protection		Class I. (to be grounded!)		
Ex protection mark	ATEX	⟨Ex⟩ II 1/2D tD A20/A21 IP67 T* -30°C≤Tamb≤+60°C *(see table 2.2)		
	IECEx	Ex t IIIC T* Da/Db IP67 -30°C≤Tamb≤+60°C *(see table 2.2)		
Mass	plastic housing	1.5 kg	1.5 kg (+ 1.4 kg/m)	1.5 kg (+ 0.6 kg/m)
	aluminium housing	1.88 kg	1.88 kg (+ 1.4 kg/m)	1.88 kg (+ 0.6 kg/m)

(1) Depend on friction and granular size of the medium

2.2 SPECIAL DATA

3. MOUNTING

Prior to installation, it is advised to check the switching function for proper adjustment on a sample quantity of material (see: Adjustment). The unit may not work with mediums within the specified density range but having very large size of granules or extremely little friction.

> **WARNING!** *Handle the device with great care, especially the sensing probe. Any impact on the sensing probe may ruin its resonance system.*
> *A protective shield should be installed (see Figure 6) if the probe is exposed to falling material or excessive mechanical load.*

Screw in the device by its hexagon neck. After screwing tight the process connection, the housing can be rotated (max. 300°), to adjust the cable gland to the required position.

It might be necessary to install the device at an offset level position relative to the switching level actually required taking into account caving or arching of the material in the silo (see Figure 4).
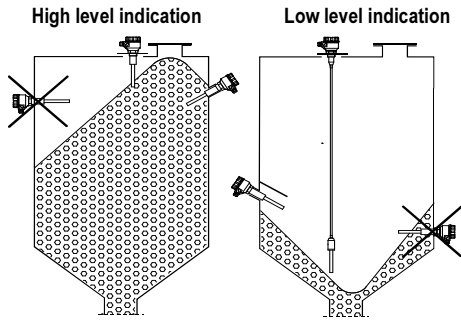

High level indication **Low level indication**

Figure 4.

With powder level detection device should be installed at an inclination exceeding the angle of repose (or, in case of high level detection vertically), to prevent powder deposition on vibrating rod that might substantially reduce the self-cleaning effect. Also avoid mounting the rod in a recess (see Figure 5)

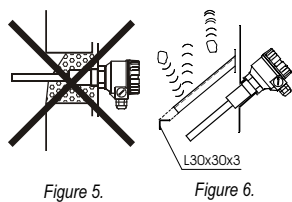

Figure 5. *Figure 6.*

In case of tanks that are likely to be exposed to intense vibrations, necessary provisions shall be made for damping the vibrations acting on the device (e.g. vibration damping inserts made of rubber have to be applied).

4. INSTALLATION, PUTTING INTO OPERATION

Remove the top cover of the housing to access the connection terminals and adjusting switches.

Do not remove the wire form terminal pin 1 (Figure 7) because it is an internal connection. For grounding the unit use the PE grounding screw terminal PE.

After proper installation and the electrical connection, established the device is ready for operation. The switched-on state is indicated by the lighting of the LED.

The DENSITY (switch **A**) switch is to be set in accordance with the density of the material:

- LOW position, recommended for loose and light materials with **density** below 0.1 kg/dm^3 represents **small energy** and **amplitude** of vibration as well as **great sensitivity** of detection.
- HIGH position, recommended for (thick and heavy) materials with **density** over 0.1 kg/dm^3 represents vibration with **great energy** and **amplitude** and **small sensitivity** of detection

The instrument may not switch correctly in mediums with density less than 0.05 kg/dm^3 or with very small internal friction.

To obtain FAIL SAFE alarm (switch **C**), use the de-energised or open state of the output as an alarm, thus a power breakdown will also be considered as alarm (see Table below).

The delay (switch **B**) is to be selected to comply with requirements of the process control technology the units is used for.

> **Note**: *The instrument may be damaged via switches by electrostatic discharge (ESD), thus the precautions commonly used to avoid ESD is to be applied.*
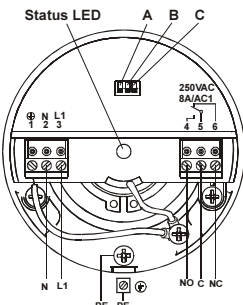

5. WIRING

5.2 SPECIAL CONDITIONS FOR SAFE USE

The enclosure shall be not opened while it is energized!

The IECEx certified apparatus may be used only in explosive dust atmospheres where the temperature class of the selected type of the apparatus does not exceed two-third parts of the minimum ignition temperature of the dust/air mixture.

The IECEx certified equipment must be assembled with cable glands certified according to protection Ex t IIIC IP67, size M20x1.5

6. MAINTENANCE AND REPAIR

The NIVOCONT R-500/R-600 series devices do not require maintenance on a regular basis. In some instances, however, the vibrating section may need a cleaning from deposited material. **This must be carried out gently, without harming the vibrating section of the vibrating rod.**

Repairs during or after the warranty period are effected at the Manufacturers. The equipment sent back for repairs should be cleaned or neutralised (desinfected) by the User.

7. STORAGE

Ambient temperature: -35 ... +60°C
Relative humidity: max. 98 %

8. WARRANTY

NIVELCO provides warranty of 3 (three) years in compliance with details described in the Warranty Card.
